## Introduction

The concept of cybersecurity refers to cracking the security mechanisms that break in dynamic environments. Implementing Cyber Security Project topics and cybersecurity thesis topics helps overcome attacks and take mitigation approaches to security risks and threats in real-time. Undoubtedly, it focuses on events injected into the system, data, and the whole network to attack/disturb it. The network can be attacked in various ways, including Distributed DoS, Knowledge Disruptions, Computer Viruses / Worms, and many more. Cyber-attacks are still rising, and more are waiting to harm their targeted systems and networks. Detecting Intrusions in cybersecurity has become challenging due to their Intelligence Performance. Therefore, it may negatively affect data integrity, privacy, availability, and security.

This training aims to demonstrate the most current Cyber Security Research Topics for Projects and areas of research currently lacking, and talk about cyber security research methodology,

The term "**cybersecurity**" applies in a variety of contexts, from business to mobile computing, and can be divided into a few common categories.

1. **Network security**
2. **Application security**
3. **Information security**
4. **Operational security**
5. **Disaster recovery and business**

## Programme Objective

- ✓ To expose the participants to the new threats of Cyber Security
