Introduction

Hospital administration encompasses organizing and supporting the patient's total medical care during an episode of illness in the hospital, and is responsible for integrating the various functions and services. A hospital is a multifaceted organization comprising many committees, departments, types of personnel, and services. It requires highly trained employees, efficient systems and controls, necessary supplies, adequate equipment and facilities, and, of course, physicians and patients.

Hospital safety include the safety of both the patients and the quality of a hospital. It defines the safety and health care of patients. Safety includes free of errors, accidents, infections and disease spread. Hospital legal issues consist of medical cases becomes a medico-legal case when the attending doctor clinically examines the patient and their history and forms the opinion that an investigation by law enforcement is needed.
